

ABSTRACT

[0026] The invention pertains to a partition (1) of glass, consisting of at least two frameless side parts (2, 3), which are attached to the floor (8) and to a ceiling construction (7), and of at least one frameless glass element (4), which is attached to the two side elements (2, 3) and to the ceiling construction (7). To create a partition (1) with a glass element (4) which can be attached to the side parts (2, 3) and the ceiling structure (7) without the use of fittings, the glass element (4) is attached nonpositively to the side parts (2, 3) and to the ceiling structure (7) exclusively by the use of a permanently elastic compound (9).
